

Bioresonance – An Essential Lifeline?

Description

“So HIGHLY recommended by a Lyme and Msids sufferer: Words cannot express my appreciation for what Chris and that magical machine has done for me.

When I first went to “Bioresonance Therapy”™ I was all but written off by the NHS. The diagnostic machine confirmed what my symptoms/rash/private blood test and my research was telling me. Most people know that Lyme is a dirty and politically charged word within the NHS. And finding an evidence-based scientific approach to diagnosis and treatment has literally changed my life and my mental health so much.

Pre bio I couldn’t stand at all. I had a multitude of the craziest symptoms, was in so much pain and most of the time was not even able to lift my head off the pillow. Even though David did not claim that it would fix me and/or may take a few sessions to even notice a difference, just 2 days after first treatment I miraculously could stand for a short while it was so unexpected. From then on, after getting through the herx (Jarisch Herxheimer reaction, this is literally your body reacting to the many toxins of the dead pathogens inside you and I will not lie at times it was really hard) I improved greatly.

Forward to 8 months of 3 weekly sessions as that’s all I can afford and manage, I was actually able to rock climb again, sadly at this point the NHS took an interest in me again, gave me new drugs which I was allergic to, so I missed my treatment and went backwards, had a treatment got better, now while I attend an 8 week NHS pain management course I am not allowed to have any treatment/pain meds and not surprisingly everything has regressed. Since starting bio-res 70% of my insanely torturous symptoms have gone but stopping it has allowed the bacteria/parasites/funguses/and viruses to party and lots have returned. I am counting down the days when I can get to that next appointment and undo what this break in my vital treatment has caused.

I cannot refuse the NHS treatment so just have to start again ASAP. I have *Borrelia Burdorferi*, *Borrelia Lonestari*, *Borrelia WA1*, *Babesia*, *Rickettsia*, *E.B.V*, *Mycoplasma*, and *Protozoa* that I can remember after getting bitten by an infected tick in Richmond Park. I am not affiliated with this company in any way I am just a patient that got lucky finding an essential life line and this will sound totally OTT but I want to shout out loudly what a life saver these guys are. Also as a bonus Chris is a very likeable, well read,

well informed guy and I enjoy my sessions and by the time I get back to Leeds station can now feel the benefits. I really hope anyone reading this with Lyme/Lyme M.S.I.D.S will be able to experience what I have and actually get your life back. Happy for my number to be passed on to anyone who wants more info. Thank you from the bottom of my heart to Bioresonance Therapy Leeds.â€•
