

I'm not a doctor: keep it simple

## **Description**

# **Bioresonance therapy: a simple explanation**

## **How it works: the video**

If you're short of time or would just like a straightforward explanation, just watch this video which explains all:

## **Bioresonance in a nutshell**

Biophysicists in the 1920's discovered that cells emit energy and this energy can be measured and recorded as a frequency. These frequencies could be used to detect problems in a body and be used to treat a sick person.

Many evidence based studies have been conducted since and many people testify to the benefits they

have had with the treatment. Some might say it's a Placebo effect but this cannot be the case on the many animals that have been effectively treated.

## Useful images

This image shows how its not often a single cause that makes us sick but a build up of multiple stressors, bioresonance helps to identify these problems.

This image shows a well known fact that matter ie cells in our body is compressed energy and energy can be measured

This image shows how irregular frequencies can be restored

## Your next steps

- Read a more detailed explanation on our main Bioresonance and [how it works page](#)
- If you are a practitioner, find out more about how [Bioresonance machines](#) could support your patients
