

Preppers and disaster preparedness

Description

In the event of a financial collapse or another disaster, being able to take care of your medical needs could be very difficult. The BICOM® mobile cannot put a leg back on but according to doctors in Germany that treat sports injuries, it can speed healing by 50% for **broken bones, ligament damage and muscle strain**.

But it is even more effective for acute situations such as **bee stings or other bites**. Vets will use the bee sting programs to halt a dog in the throws of a serious life-threatening anaphylactic shock, the same can be done to humans out in the field.

For **severe diarrhoea** simply add a small sample to the BICOM® input cup and run a specific program. The BICOM® analyses the sample for pathogens and can treat them effectively, bringing relief within a few hours.

You don't need medical experience to operate the BICOM®, it runs on a battery too.

The BICOM® Optima is an official Class 2a medical device with CE certification

For a full list of treatment programs [Quick reference BICOM® Handbook](#)
