

MORE INFORMATION

DIAGNOSING

Using the "unmask" vials from the DC CTT test set for 2'-3' with pr. 192 and then run the test with the parasitic vials.

Another option is to insert the "unmask" vial in the input cup of the 2nd channel and run it along with the testing program 191 while testing the parasitic vials.

ALLERGY CONNECTIONS

Parasites can cause allergic reactions in combination with certain foods. The most frequent combinations are:

Ascaris + milk

Geotrichum candidum + milk

Aspergillus + wheat

Trichophyton rubrum + wheat

RELATIONSHIPS

- Fungal infections : tapeworms, pinworms, ascaris (intestinal roundworm), lamblia
- Tumors : fasciolopsis buski (intestinal fluke), trichomonads
- Lung diseases : pneumocystis carinii, ascaris
- Milk allergy : ascaris
- Egg allergy : salmonella
- Wheat allergy : eurytremia pancreaticum
- Hashimoto disease : toxoplasma gondii
- Migraines : strongyloides

TREATMENT

STEP 1. Elimination of blockages

STEP 2. Elimination of pathogens which stress the body.

Parasite therapy pr. no. 3442.0 (Optima plus) :

Input cup: parasite vial(s)

Output: modulation mat

Ai, low deep frequency, bandpass 12.3 Hz, wobble = no, sweep sym., amplification Ai= 50, amplification sweep rate 50 sec, therapy time = 15 min

Program 191 (Ai) or 193 (Di) (optima or 2000):

Input cup: parasite vial(s)

Output: modulation mat

Amplification mode and level need to be individually tested.

The same applies to the therapy time.

Use A+Ai combinations to provoke then invert

PARASITES

BRING MORE THAN THEMSELVES

"KILLED MORE PEOPLE THAN WARS?"

It has been reported that parasites are a killer, we look at how to treat and protect yourself

There are three main types of parasitic forms:

PROTOZOA: a single-celled organism. Plasmodium, which causes malaria, is an example. A protozoa can only multiply within the host.

HELMINTHS: worm parasites. An example is Schistosomiasis. Other examples include roundworm, pinworm, trichina spiralis, tapeworm and flukes.

ECTOPARASITES: these live on, rather than in their hosts, these include lice, fleas and some mites.

SYMPTOMS

- Itchy anus or vagina
- Weight loss and/or increased appetite
- Abdominal pain, gas, bad digestion or other symptoms of IBS
- Diarrhoea, and vomiting
- Skin irritations or unexplained rashes, hives, rosacea or eczema
- Sleeping problems (trouble falling asleep, or waking up multiple times during the night)
- Teeth grinding during one's sleep
- Anemia
- Aches and pains in muscles or joints
- Fatigue, exhaustion, depression, or frequent feelings of apathy
- Allergies
- Anxiety

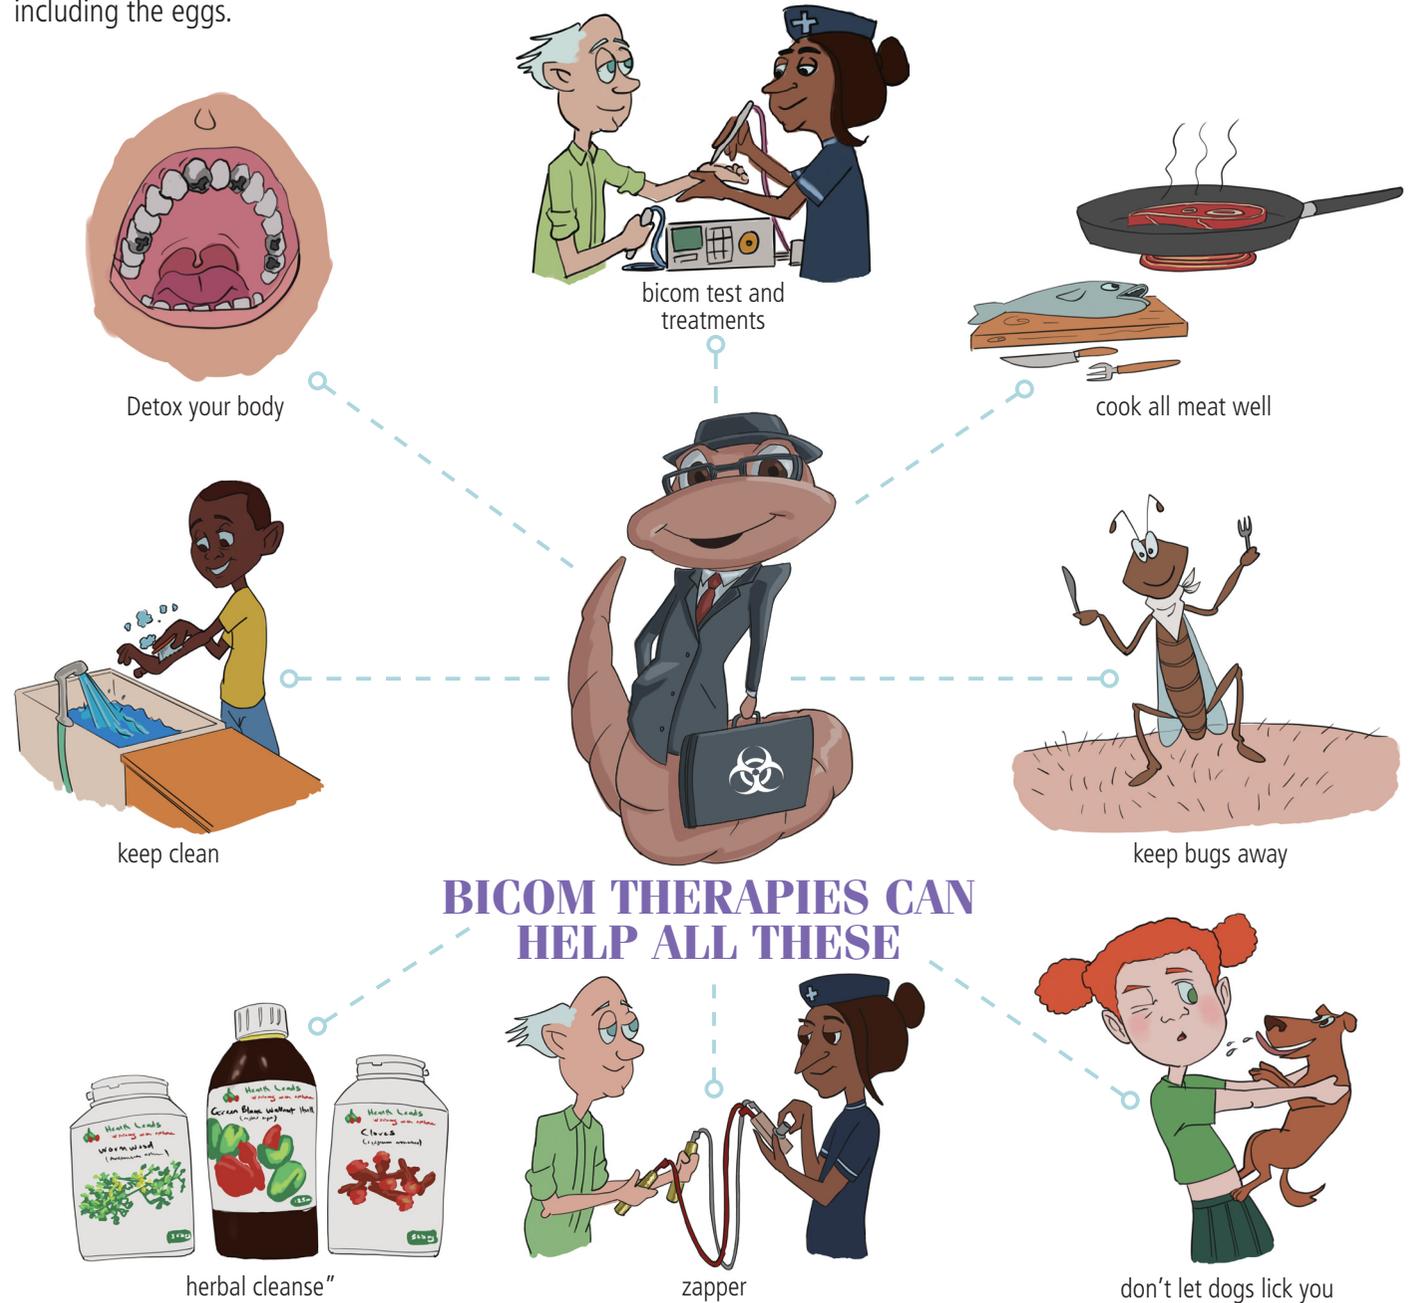

OTHER FOODS THAT CAN HELP

- **Fresh pineapple** and papaya (seeds) contain the protein-digesting enzymes, bromelain and papain, which help cure worm infestations.
- **Pure pomegranate juice** can be effective against tapeworms.
- **Pumpkin seeds** help to eliminate worms.
- **Sage, fennel, cloves, and thyme** are anti-parasitic seasonings that can be added to food.
- **Garlic** is a vermifuge against pinworms, hookworms, tapeworms and round worms.
- **Mugwort tea** helps against parasite invasion.
- Other foods with anti-parasitic properties include **onions, cabbage, crushed lemon seeds, blackberries, ground almonds, radishes, and figs.**
- **Green Black Walnut Hull, Wormwood, Cloves, Vitamin C,**
- **MethylSulfonylMethane (MSM), Zinc:** 25-50mg
- **Garlic:** 1250mg
- **Coenzyme Q10:** 200-500mg
- **Alpha Lipoic Acid:** 100-200mg

*Take Vitamin C & MSM together for synergistic action

WHAT TO DO

Doctors don't often test for parasites which is strange because vets do and we are in close contact with animals and we travel more than we used to, so don't dismiss the possibility you might have them. Parasites can even affect your mood and health so its essential you test yourself regularly or take a herbal cleanse to remove parasites in all their stages, including the eggs.
